

Walk ! Explore ! Earn !

How we get this idea

Answer from the game's chief designer:

When I was a child, I lived in the suburb, and always enjoyed catching and battling insects.

Today as a grown-up, I work in the concrete jungle in suits, and struggling for life. There is not much chance for me to embrace the nature.

To reminisce my good old memories and resonate with people like me, I designed Step Monsters - encourage ourselves to walk more, enjoy the game of our childish dream, and get rewarded from tokens.

Two ways of walking

Walking Mode

- Players must walk different distances(500M-3Km) to unlock the chance to battle against the monster.
- **This Mode works for players who:**
 1. Enjoy walking long distances.
 2. Want to earn steady LST rewards.

Explore Mode

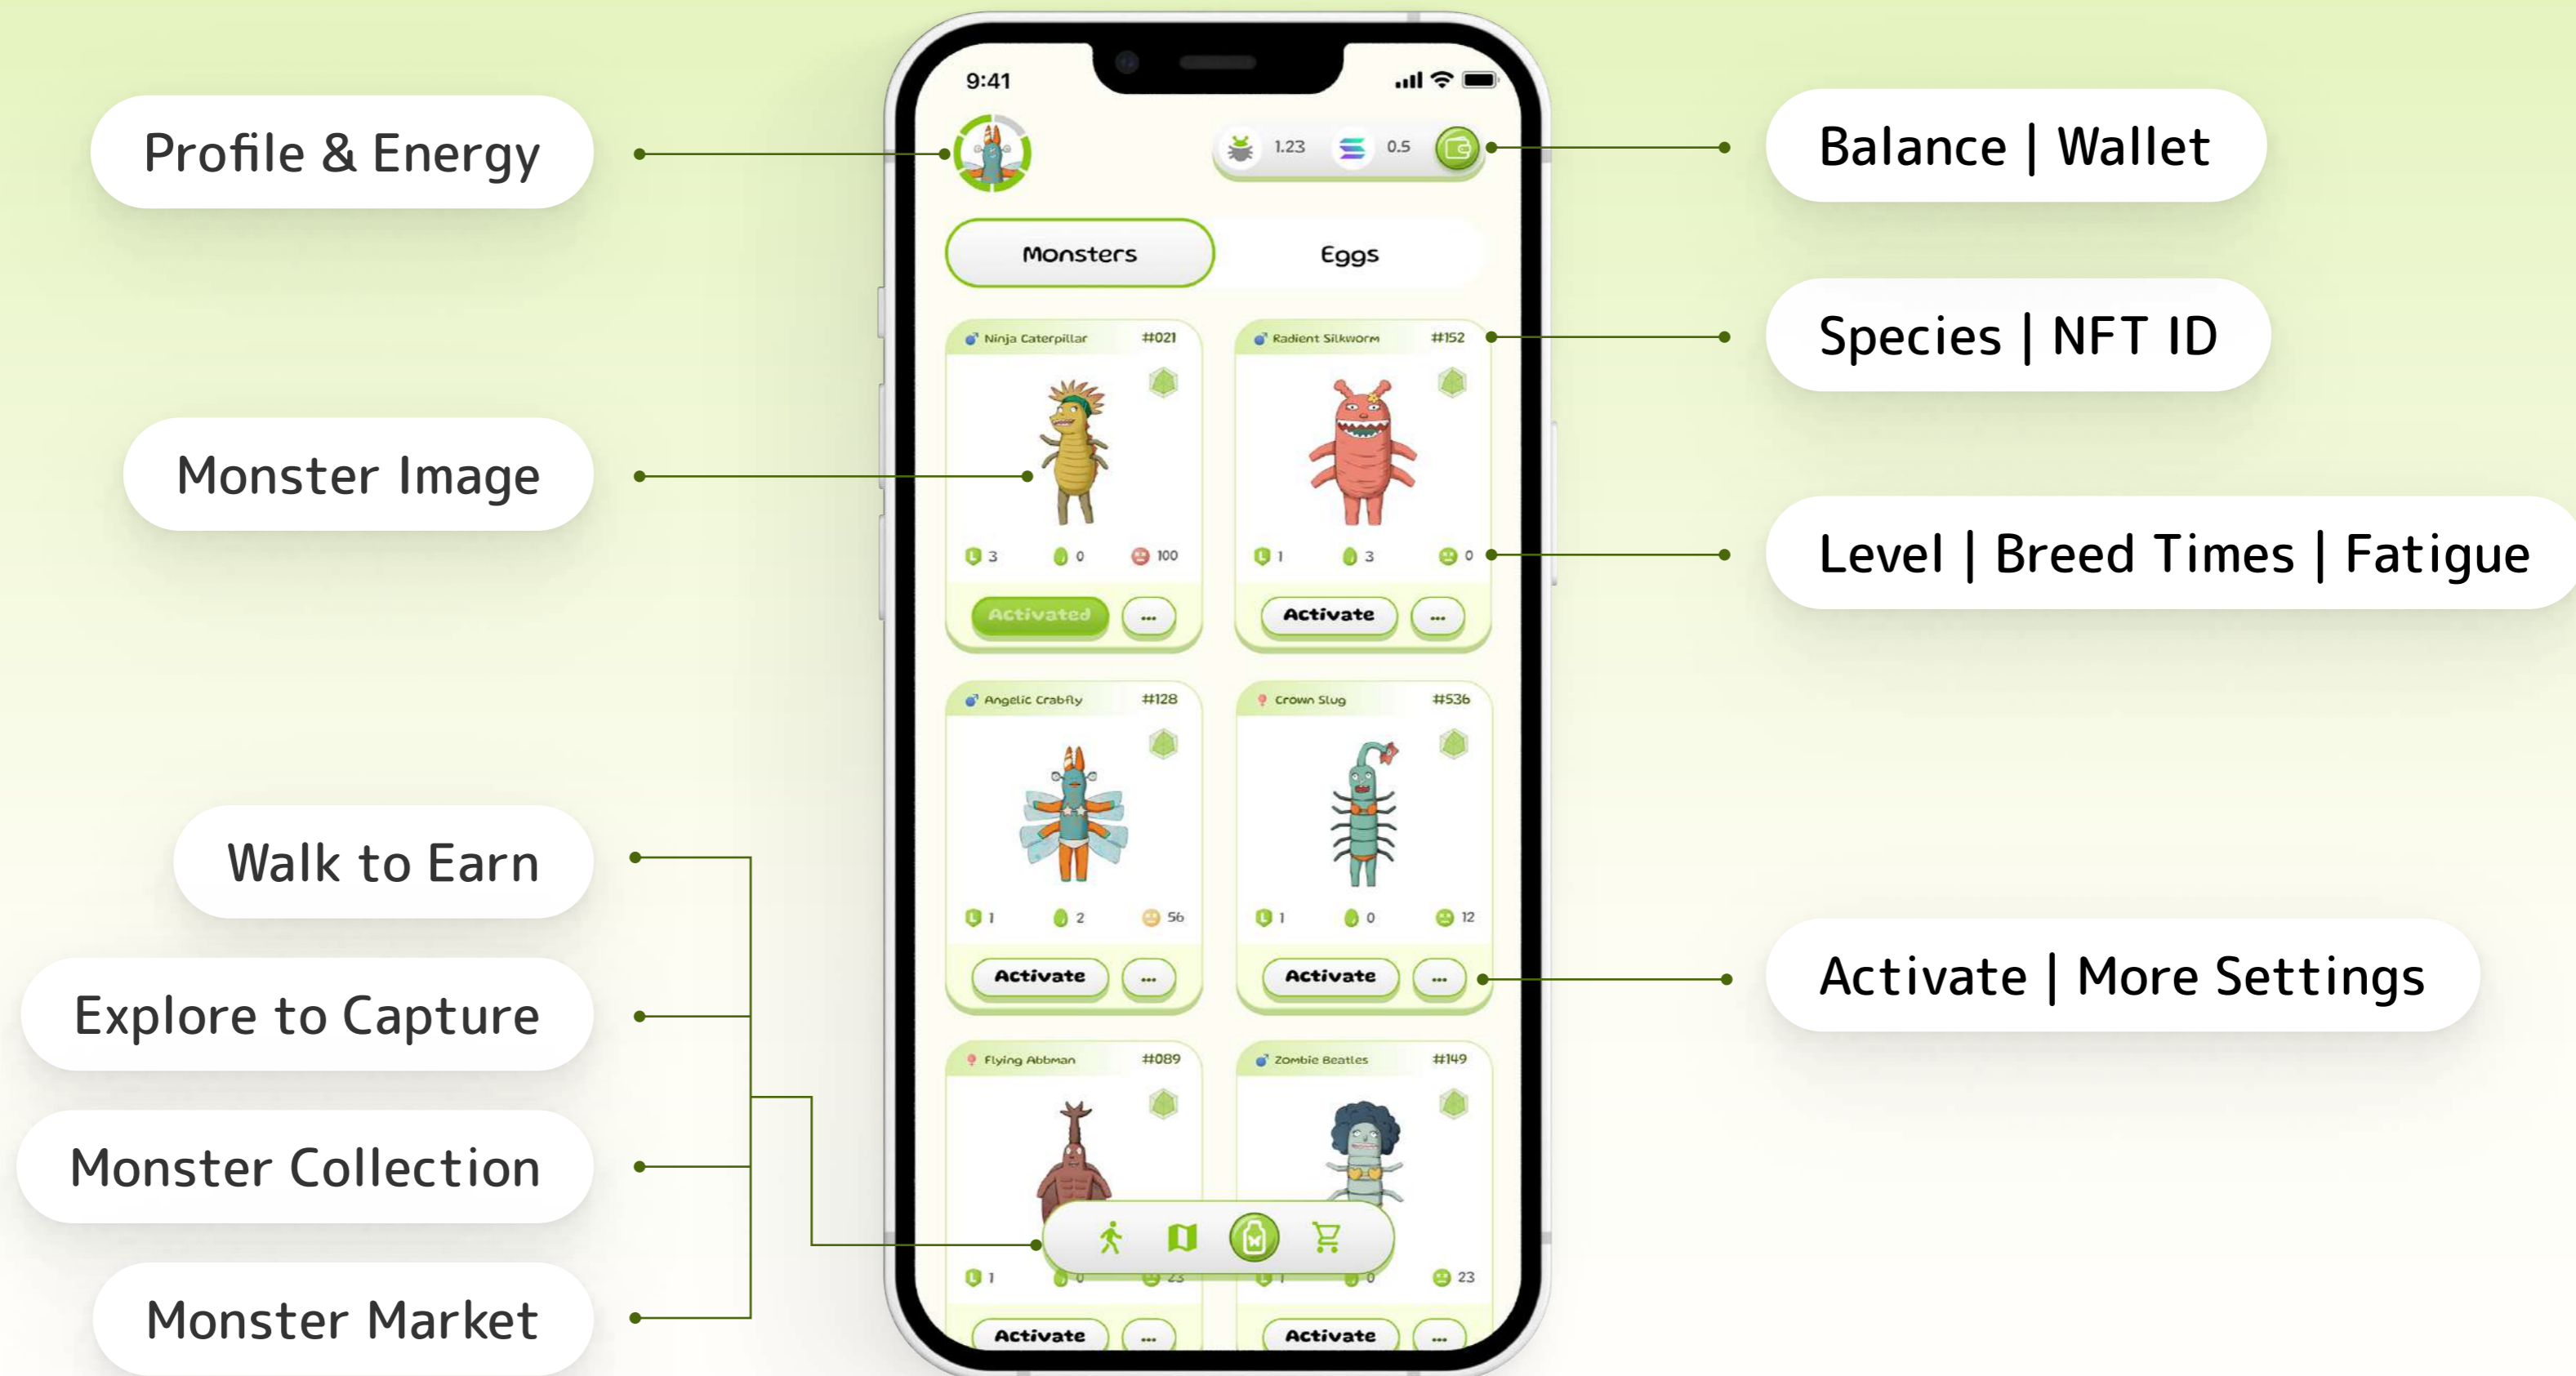

- Monsters will be located casually, and players will have to go near battle them to win LST rewards.
- **This Mode works for players who:**
 1. Enjoy exploring the city.
 2. Meeting friends in real life.

A combination of StepN and Pokemon Go

- Based on Solana, the fastest blockchain
- Supports two game modes: walking mode, and exploration mode
- A built-in NFT market for the convenience of users
- Up to 20 races of monsters
- A dual token system: LST the utility token, and LMT the governance token.

Things you can do with the monsters

Upgrade

Players can level up their monsters by costing LST tokens. Monsters can be upgraded up to Lv.30. With each upgrade, the monster's battling ability will be greatly enhanced, and players can earn more token rewards.

Breed

Breeding is when players use 2 monsters who are of the same race but different gender to breed a new Egg. This process would also cost players certain amount of tokens.

Synthesize

Synthesizing is the process for players to synthesize a high-level monster from low-level monsters.

LST and LMT

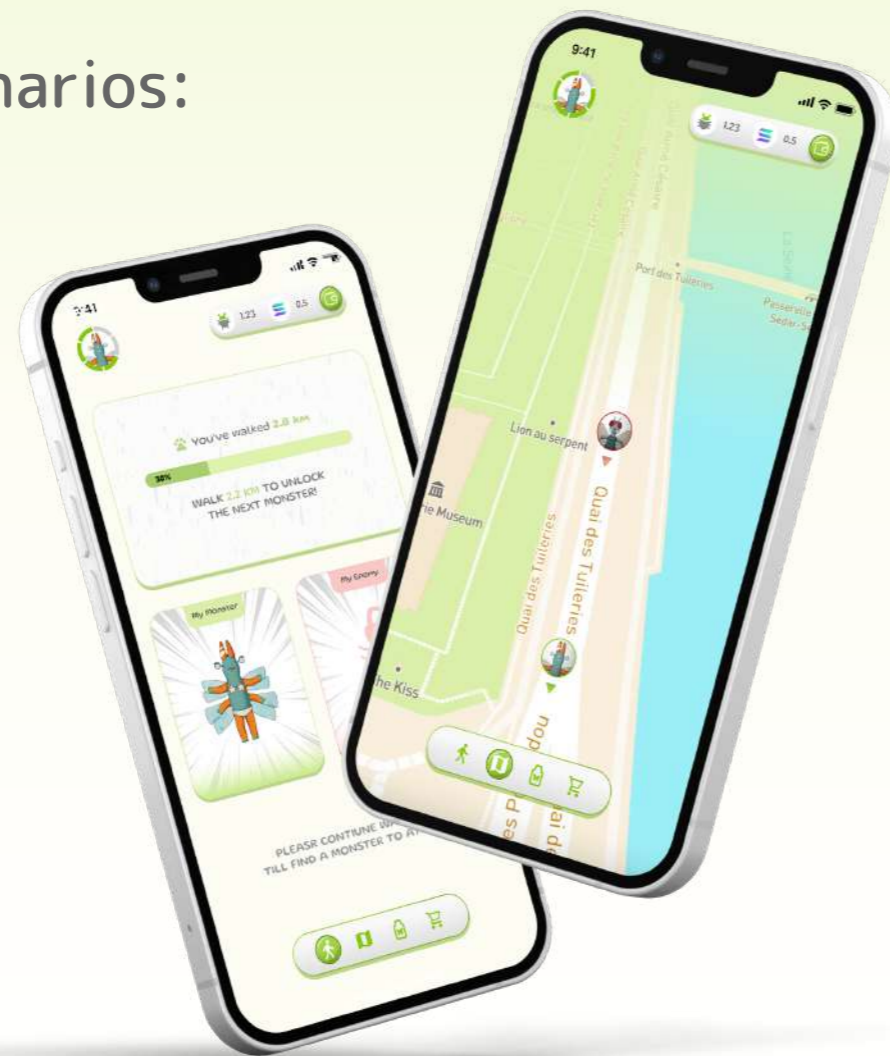

A dual token structure

Lite Satoshi Token (LST)

LST has an unlimited supply and is earned when players walk in Walking Mode or Explore Mode winning the fight.

LST Usage Scenarios:

1. Breeding
2. Synthesize
3. Level up

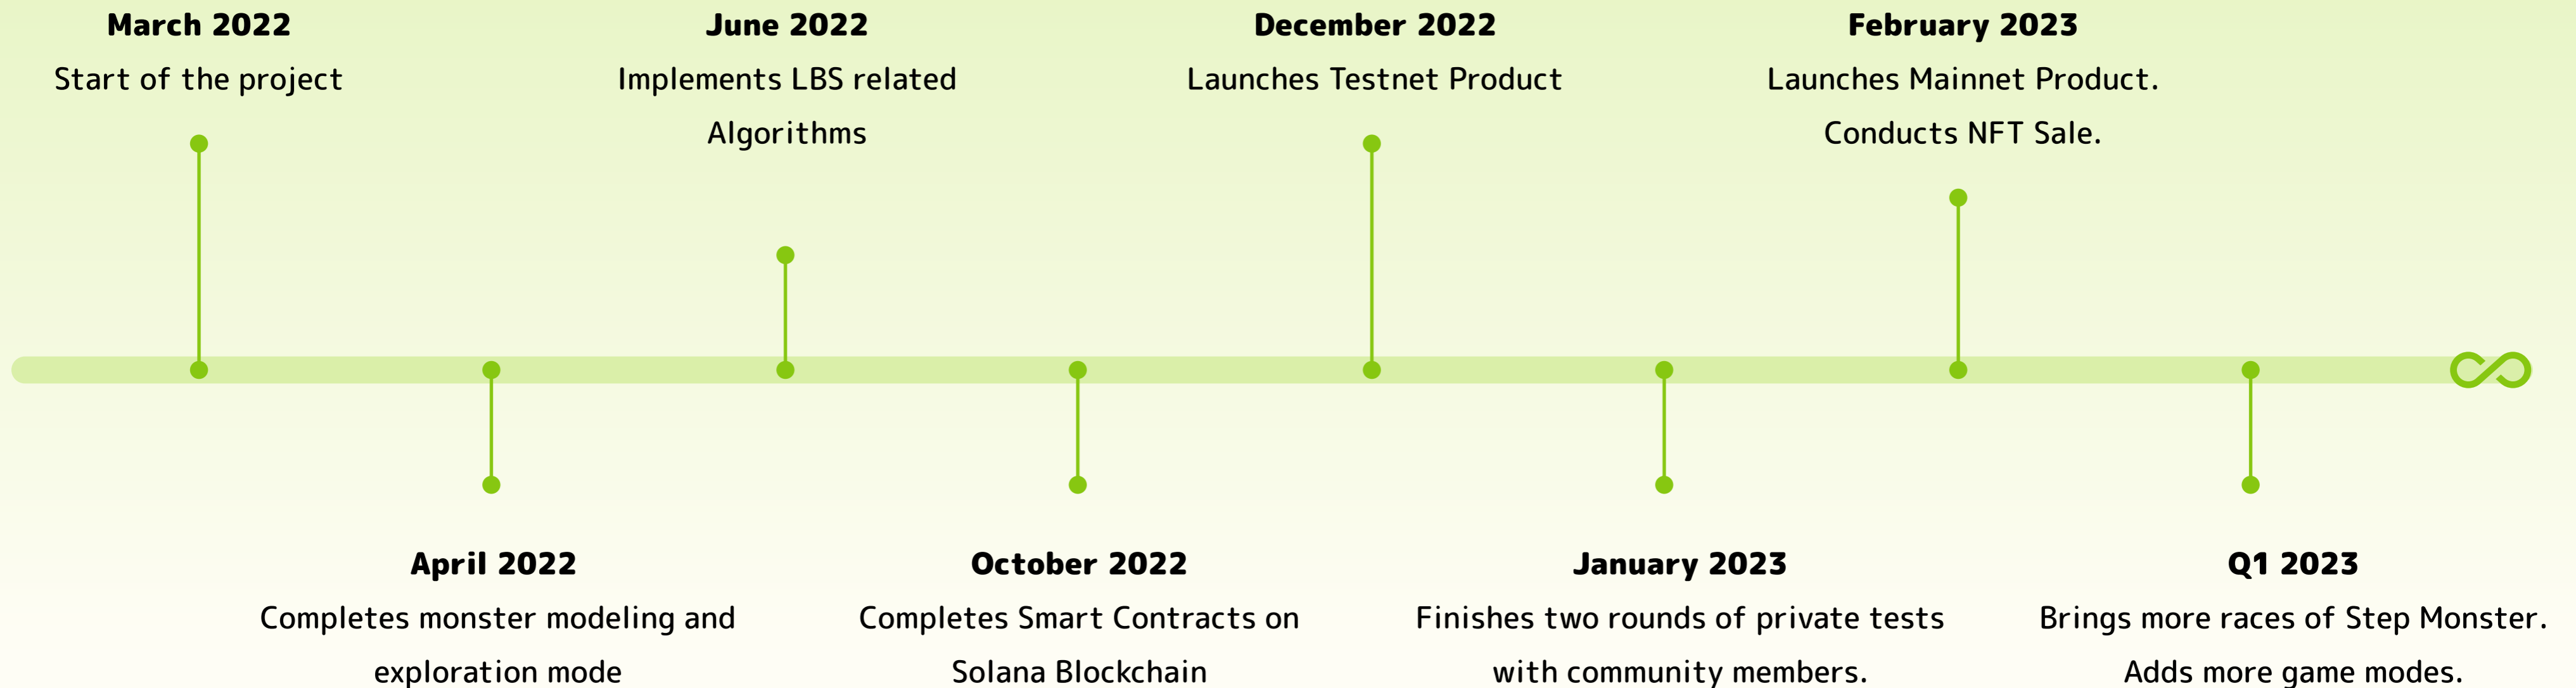

Lite Meta Token (LMT)

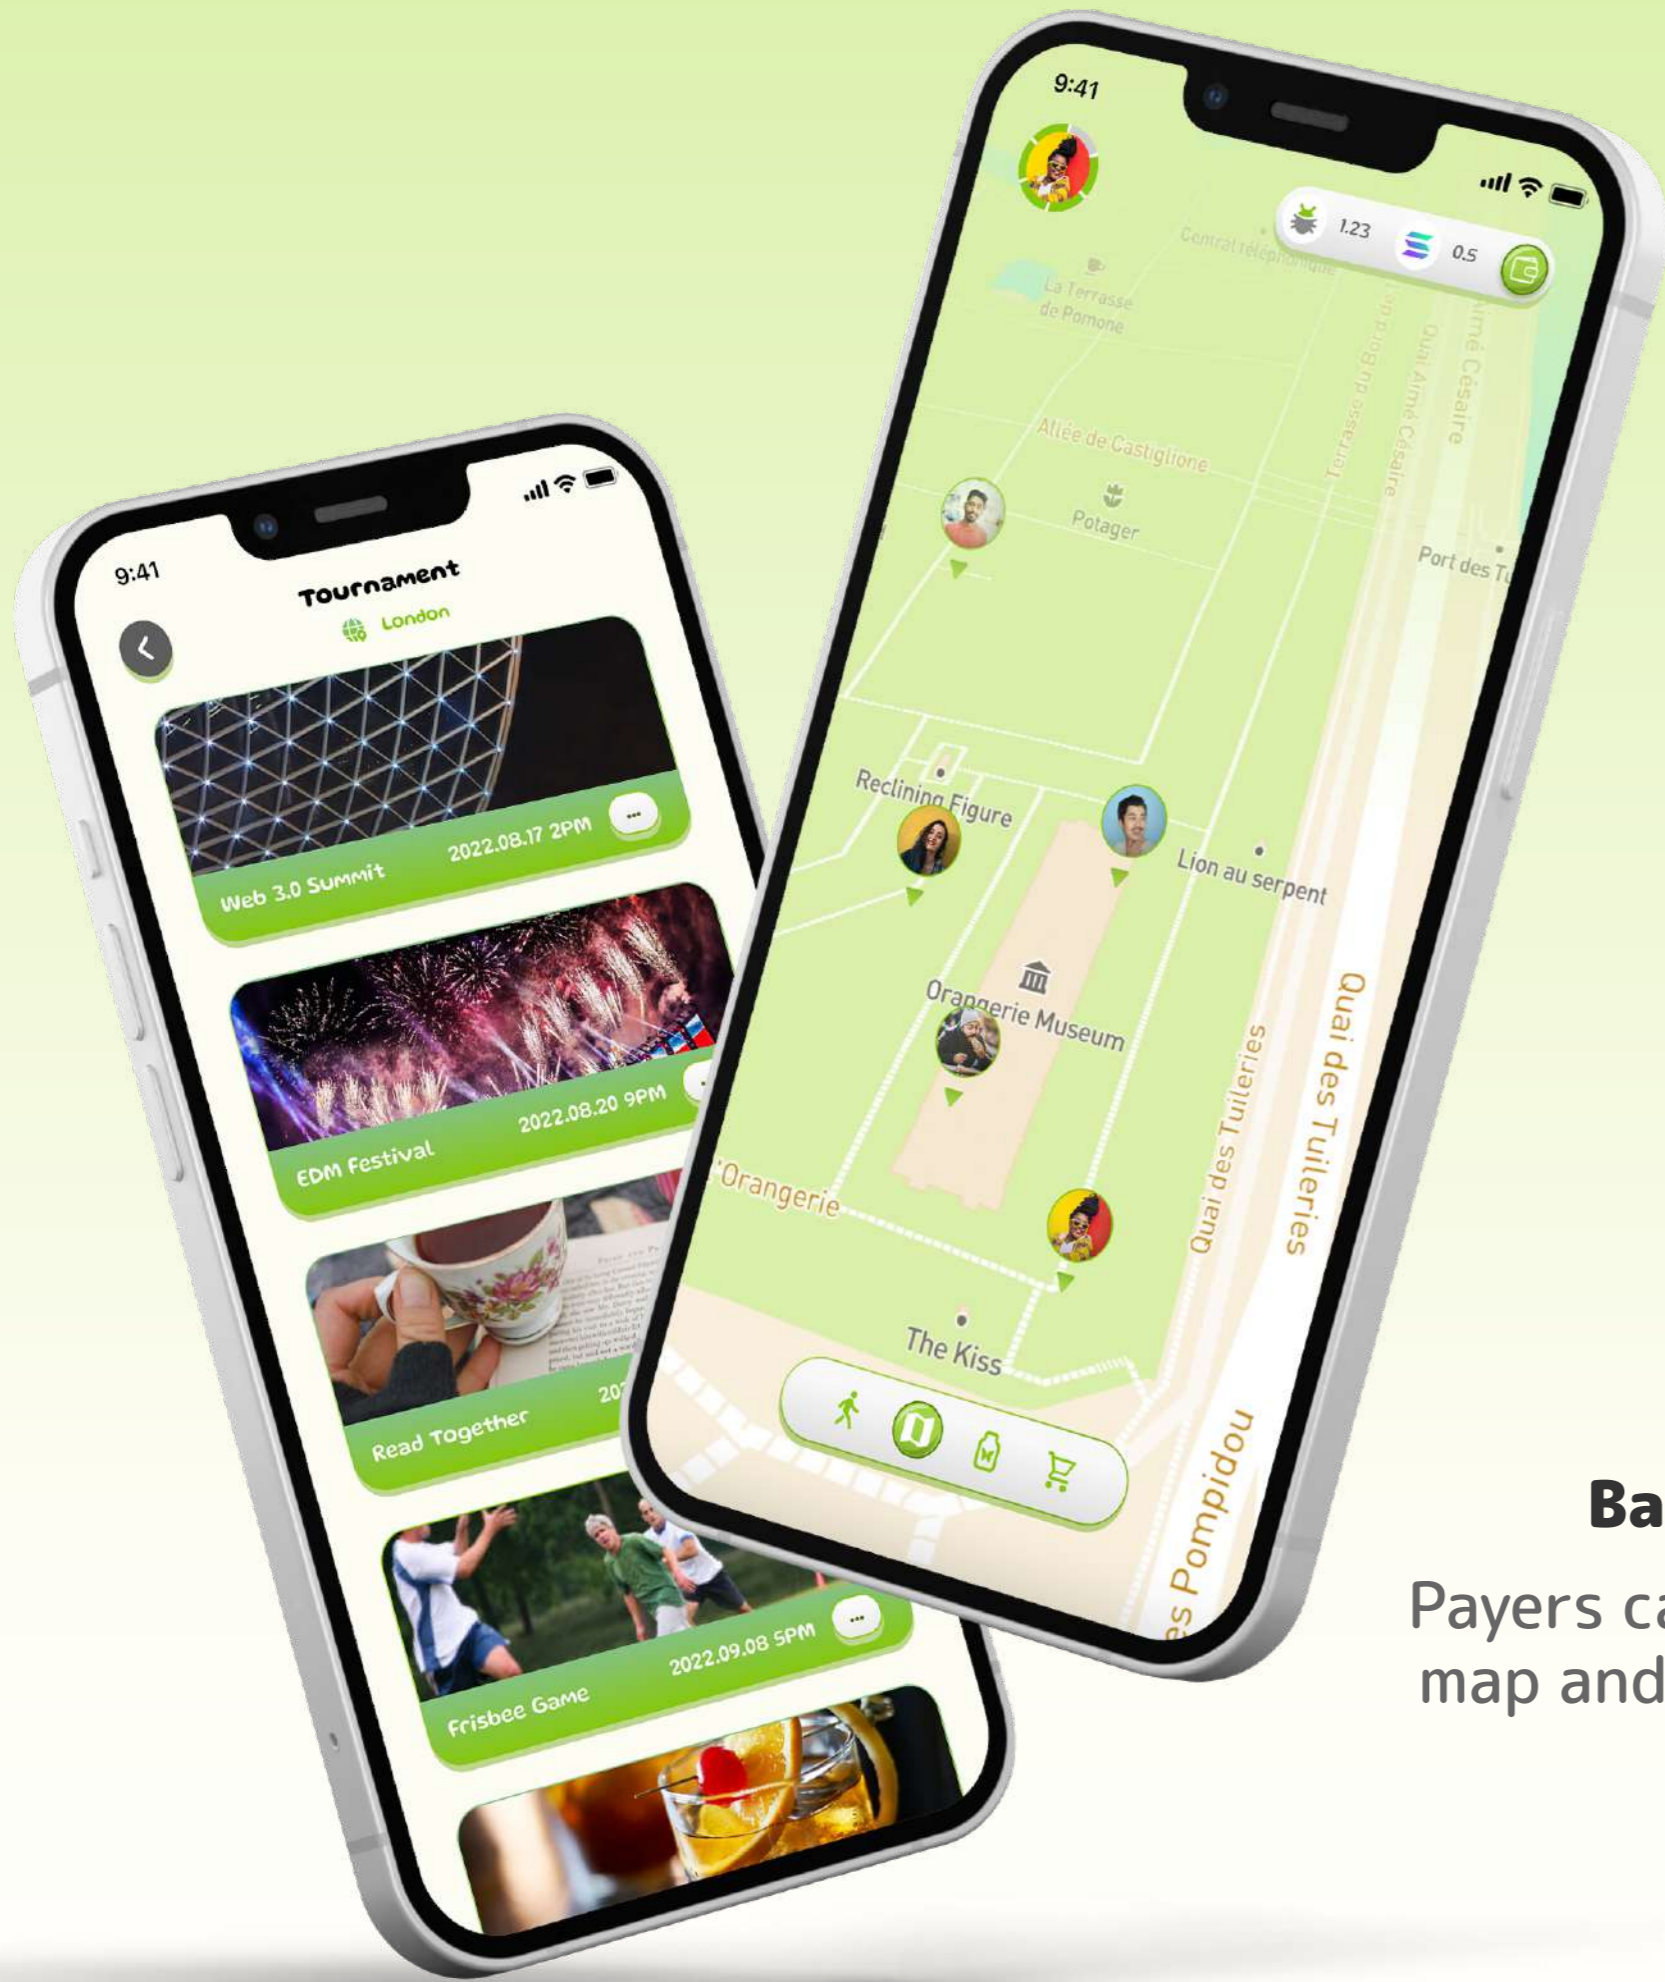

LMT is Step Monster's governance token. Players can vote for proposals by holding LMT. More usage scenarios will be developed in the future.

Project Timeline

Future Plans: LBS based PVP

Battle with Nearby Players

Players can approach other players on the map and battle with them to win special rewards.

Make Friends In Guilds

Players can join guilds and work on various tasks and challenges together.

Thank you!
